

Word Processing – Notes

1. Meaning of Word Processing

Word Processing is the process of creating, editing, formatting, saving, and printing documents using a computer.

A **Word Processor** is software used to perform word processing tasks.

Examples of word processing software:

- Microsoft Word
- Google Docs
- LibreOffice Writer

These programs help users create documents like letters, reports, assignments, and books.

2. Features of Word Processing

A word processor provides many useful features:

1. **Editing** – Making changes in the document.
 2. **Formatting** – Changing the style of text (font, size, color).
 3. **Spell Check** – Detects spelling mistakes.
 4. **Find and Replace** – Finds a word and replaces it with another word.
 5. **Insert Images** – Pictures and graphics can be added.
 6. **Tables** – Used to organize data in rows and columns.
 7. **Print** – Documents can be printed easily.
-

3. Advantages of Word Processing

- Easy to **edit documents**.
 - **Spelling and grammar checking** is available.
 - Documents look **neat and professional**.
 - Documents can be **saved and shared** easily.
 - Saves **time and effort**.
-

4. Components of a Word Processor Window

Important parts of a word processor window:

1. **Title Bar** – Shows the name of the document.
2. **Menu Bar / Ribbon** – Contains different commands and options.

3. **Toolbar** – Provides quick access to tools like save and print.
4. **Status Bar** – Shows page number, word count, etc.
5. **Scroll Bar** – Used to move up and down in the document.

5. Common Formatting Tools

Formatting tools help to improve the appearance of text.

- **Bold (B)** – Makes text darker.
- **Italic (I)** – Slants the text.
- **Underline (U)** – Adds a line below text.
- **Font Size** – Changes the size of text.
- **Alignment** –
 - Left
 - Center
 - Right
 - Justify

6. Important Shortcut Keys

Shortcut Key Function

Ctrl + N	Create a new document
Ctrl + S	Save document
Ctrl + C	Copy text
Ctrl + V	Paste text
Ctrl + X	Cut text
Ctrl + Z	Undo last action
Ctrl + B	Bold text

7. Uses of Word Processing

Word processing is used for:

- Writing letters
- Preparing school assignments
- Creating reports
- Writing books and articles
- Making office documents

1. What is LibreOffice

LibreOffice is a **free and open-source office suite** used to create documents, spreadsheets, presentations, and drawings.

It is developed by the organization **The Document Foundation**.

LibreOffice can run on different operating systems like **Windows, Linux, and macOS**.

Example: LibreOffice

2. Components of LibreOffice

LibreOffice includes several applications:

1. **LibreOffice Writer**

Used for creating and editing text documents such as letters and reports.

2. **LibreOffice Calc**

Used for calculations, data analysis, and creating tables.

3. **LibreOffice Impress**

Used to create presentations and slides.

4. **LibreOffice Draw**

Used for creating diagrams and drawings.

5. **LibreOffice Base**

Used for managing databases.

6. **LibreOffice Math**

Used for writing mathematical formulas.

3. Features of LibreOffice

LibreOffice provides many useful features:

- It is **free to download and use**.
- It supports many **file formats**.
- It provides tools for **documents, spreadsheets, and presentations**.
- It has **spell check and formatting tools**.
- It can **export files as PDF**.
- It works on **different operating systems**.

4. Advantages of LibreOffice

- **Free and open source** software.
- No license fee is required.
- Works on multiple platforms.
- Supports many file formats.
- Regular updates and improvements.

5. LibreOffice Start Center

When LibreOffice opens, the **Start Center** appears.

The Start Center allows users to:

- Create new documents
- Open existing files
- Access different LibreOffice applications

It shows options like:

- Writer Document
- Calc Spreadsheet
- Impress Presentation
- Draw Drawing
- Base Database

6. File Formats Supported by LibreOffice

LibreOffice uses **Open Document Format (ODF)** as its default format.

Common file formats:

- Writer → **.odt**
- Calc → **.ods**
- Impress → **.odp**

LibreOffice can also open files created in **Microsoft Office** such as **.docx**, **.xlsx**, and **.pptx**.

7. Uses of LibreOffice

LibreOffice is used for:

- Writing documents and letters
- Creating spreadsheets for calculations
- Making presentations
- Drawing diagrams
- Managing databases

8. Difference Between LibreOffice and Microsoft Office

LibreOffice

Free and open source

Developed by The Document Foundation

Default format is ODF

Microsoft Office

Paid software

Developed by Microsoft

Uses proprietary formats

Components of LibreOffice Writer – Notes

1. What is Writer

LibreOffice Writer is the word processing application of **LibreOffice**.

It is used to create, edit, format, and print text documents such as letters, reports, and assignments.

Main Components of LibreOffice Writer

1. Title Bar

The **Title Bar** is the topmost bar of the Writer window.

Functions:

- Displays the **name of the document**
 - Shows the **application name (LibreOffice Writer)**
 - Contains **Minimize, Maximize, and Close buttons**
-

2. Menu Bar

The **Menu Bar** is located below the Title Bar.

It contains different menus that provide commands to work with the document.

Main menus include:

- **File** – Create, open, save, print documents
 - **Edit** – Cut, copy, paste, undo
 - **View** – Change the document view
 - **Insert** – Insert images, tables, symbols
 - **Format** – Change font, alignment, and style
 - **Table** – Create and manage tables
 - **Tools** – Spell check and language tools
 - **Help** – Get help and support
-

3. Standard Toolbar

The **Standard Toolbar** provides quick access to commonly used commands.

Common buttons:

- New document
- Open document
- Save document

- Print
- Copy
- Paste
- Undo / Redo

These tools help users perform tasks quickly.

4. Formatting Toolbar

The **Formatting Toolbar** is used to format the text in a document.

Common formatting tools:

- **Font style**
 - **Font size**
 - **Bold**
 - **Italic**
 - **Underline**
 - **Text color**
 - **Text alignment (Left, Center, Right, Justify)**
-

5. Ruler

The **Ruler** appears at the top and left side of the document area.

Functions:

- Set **margins**
- Adjust **indentation**
- Align text properly

There are two types of rulers:

- **Horizontal Ruler**
 - **Vertical Ruler**
-

6. Scroll Bars

Scroll bars allow users to move through the document.

Types:

- **Vertical Scroll Bar** – Moves the page up and down
 - **Horizontal Scroll Bar** – Moves the page left and right
-

7. Workspace (Document Area)

The **Workspace** is the main area where the user types and edits the document.

Functions:

- Write text
 - Insert images
 - Create tables
 - Format content
-

8. Status Bar

The **Status Bar** is located at the bottom of the Writer window.

It displays information such as:

- Page number
 - Word count
 - Language of the document
 - Zoom level
-

9. Sidebar

The **Sidebar** is located on the right side of the Writer window.

It provides quick access to:

- **Properties**
 - **Styles**
 - **Gallery**
 - **Navigator**
-

Uses of LibreOffice Writer

Writer is used for:

- Writing letters
- Preparing school assignments
- Creating reports
- Writing books and articles
- Creating notices and documents

Editing a Document – Notes

1. Meaning of Editing

Editing means making changes or corrections in a document after it has been created.

Editing helps to improve the content of the document by correcting mistakes, adding new information, or removing unwanted text.

Editing is commonly done in a word processor like **LibreOffice Writer**.

Common Editing Operations

1. Selecting Text

Before editing, the text must be selected.

Methods to select text:

- **Single click and drag** the mouse over the text
 - **Double-click** to select a word
 - **Triple-click** to select a paragraph
 - Use **Shift + Arrow keys** on the keyboard
-

2. Inserting Text

Inserting text means **adding new text** at any position in the document.

Steps:

1. Place the cursor where you want to add text.
 2. Start typing the new text.
-

3. Deleting Text

Deleting text means **removing unwanted text** from the document.

Methods:

- **Backspace key** – deletes text to the left of the cursor
 - **Delete key** – deletes text to the right of the cursor
-

4. Cut

Cut removes the selected text from one place and allows it to be pasted somewhere else.

Shortcut key:

Ctrl + X

Steps:

1. Select the text.
 2. Click **Cut** or press **Ctrl + X**.
 3. The text is removed and stored temporarily.
-

5. Copy

Copy duplicates the selected text without removing it from the original place.

Shortcut key:

Ctrl + C

Steps:

1. Select the text.
 2. Click **Copy** or press **Ctrl + C**.
-

6. Paste

Paste inserts the cut or copied text into another location.

Shortcut key:

Ctrl + V

Steps:

1. Place the cursor where you want the text.
 2. Click **Paste** or press **Ctrl + V**.
-

7. Undo

Undo cancels the last action performed in the document.

Shortcut key:

Ctrl + Z

Example:

If you delete text by mistake, Undo can restore it.

8. Redo

Redo restores the action that was undone.

Shortcut key:

Ctrl + Y

9. Find and Replace

This feature helps to **search for a word and replace it with another word** in the entire document.

Example:

Replace the word “**school**” with “**college**” everywhere in the document.

Shortcut key:

Ctrl + H

Importance of Editing

Editing is important because it:

- Corrects spelling and grammar mistakes
- Improves document quality
- Makes the document clear and accurate
- Saves time when making changes

Selecting Text – Notes

1. Meaning of Selecting Text

Selecting text means highlighting a part of the text in a document so that it can be edited, formatted, copied, moved, or deleted.

Text must be selected before performing operations like **cut, copy, paste, delete, or formatting**.

Selecting text is commonly done in a word processor such as **LibreOffice Writer**.

Methods of Selecting Text

1. Selecting Text Using Mouse

Text can be selected using the mouse.

Steps:

1. Place the mouse pointer at the beginning of the text.
2. Press and hold the **left mouse button**.
3. Drag the mouse over the text you want to select.
4. Release the mouse button.

The selected text will be **highlighted**.

2. Selecting a Word

To select a single word:

- **Double-click** on the word.

The entire word will be selected automatically.

3. Selecting a Sentence

To select a sentence:

- Press and hold the **Ctrl key** and click anywhere in the sentence.
-

4. Selecting a Paragraph

To select a paragraph:

- **Triple-click** anywhere inside the paragraph.

The whole paragraph will be selected.

5. Selecting the Entire Document

To select the whole document:

Shortcut key:

Ctrl + A

This selects all the text in the document.

6. Selecting Text Using Keyboard

Text can also be selected using keyboard keys.

Examples:

Shortcut Key	Function
Shift + Arrow Keys	Select text character by character
Ctrl + Shift + Arrow Keys	Select word by word
Shift + Home	Select text from cursor to beginning of line
Shift + End	Select text from cursor to end of line
Ctrl + A	Select entire document

Uses of Selecting Text

Selecting text is necessary for many editing operations:

- **Cut** text
 - **Copy** text
 - **Paste** text
 - **Delete** text
 - **Format** text (bold, italic, underline)
 - **Change font or size**
-

Importance of Selecting Text

Selecting text helps users to:

- Edit documents easily
- Format text quickly
- Move text from one place to another
- Save time while editing documents

Duplicating and Moving Text – Notes

1. Meaning of Duplicating Text

Duplicating text means making a **copy of the selected text** and placing it in another location in the document.

The original text **remains unchanged**, and another copy of it is created.

This is commonly done in a word processor such as **LibreOffice Writer**.

Steps to Duplicate Text (Copy and Paste)

1. **Select the text** you want to duplicate.
2. Click **Copy** from the toolbar or press **Ctrl + C**.
3. Place the cursor where you want the copied text.
4. Click **Paste** or press **Ctrl + V**.

Result:

The same text appears in the new location while the original text remains in its place.

Example of Duplicating Text

Original text:

Computer is an electronic machine.

After duplicating:

Computer is an electronic machine.

Computer is an electronic machine.

Meaning of Moving Text

Moving text means transferring selected text from **one place to another place** in the document.

The text is **removed from the original position and placed in a new position**.

Steps to Move Text (Cut and Paste)

1. **Select the text** you want to move.
2. Click **Cut** from the toolbar or press **Ctrl + X**.
3. Place the cursor at the new location.
4. Click **Paste** or press **Ctrl + V**.

Result:

The text disappears from the original location and appears in the new location.

Difference Between Duplicating and Moving Text

Duplicating Text	Moving Text
Creates a copy of the text	Transfers text to another place
Original text remains	Original text is removed
Uses Copy + Paste	Uses Cut + Paste

Advantages of Duplicating and Moving Text

- Saves time while editing documents
- Avoids typing the same text again
- Helps organize the document properly
- Makes editing easier

Shortcut Keys

Shortcut Key	Function
Ctrl + C	Copy text
Ctrl + X	Cut text
Ctrl + V	Paste text

Find and Replace Command – Notes

1. Meaning of Find Command

The **Find command** is used to **search for a specific word or text** in a document.

It helps the user quickly locate a word, phrase, or sentence without reading the entire document.

This feature is available in word processors like **LibreOffice Writer**.

2. Shortcut Key for Find

Ctrl + F

This shortcut opens the **Find bar** where you can type the word you want to search.

3. Steps to Use Find Command

1. Open the document.
2. Press **Ctrl + F** or click **Edit → Find**.
3. Type the word or text in the **Find box**.
4. Press **Enter**.

The word will be **highlighted in the document**.

Replace Command

4. Meaning of Replace Command

The **Replace command** is used to **replace one word or phrase with another word** throughout the document.

It helps to correct repeated mistakes quickly.

Example:

Replace the word **“School”** with **“College”** in the whole document.

5. Shortcut Key for Replace

Ctrl + H

This shortcut opens the **Find and Replace dialog box**.

6. Steps to Use Replace Command

1. Press **Ctrl + H**.
2. The **Find and Replace window** will appear.

3. Type the word in the **Find box**.
4. Type the new word in the **Replace box**.
5. Click **Replace** or **Replace All**.

7. Difference Between Replace and Replace All

Replace	Replace All
Replaces one occurrence at a time	Replaces all occurrences in the document
User decides each replacement	Automatically replaces all words

Advantages of Find and Replace

- Saves time when editing documents
 - Helps correct repeated mistakes quickly
 - Makes editing large documents easier
 - Improves document accuracy
-

Example

Sentence in document:

The school organizes many school events every year.

Using Replace command:

Replace **school** → **college**

Result:

The college organizes many college events every year.

Important Shortcut Keys

Shortcut Key	Function
Ctrl + F	Find text
Ctrl + H	Find and Replace

Checking Spelling and Grammar – Notes

1. Meaning of Spelling and Grammar Check

Spelling and Grammar Check is a feature that helps to **find and correct spelling and grammatical mistakes** in a document.

This feature is available in word processors such as **LibreOffice Writer**.

It helps users create **accurate and professional documents**.

2. Spelling Check

Meaning

Spelling Check identifies words that are **spelled incorrectly** in a document.

Incorrect words are usually **underlined with a red wavy line**.

Example:

If you write **computr** instead of **computer**, the software will show it as a spelling mistake.

Steps to Check Spelling

1. Open the document.
2. Click **Tools → Spelling**.
3. The spelling dialog box will appear.
4. The program shows incorrect words and suggests correct spellings.
5. Choose the correct word and click **Change**.

Shortcut Key for Spelling Check

F7

This opens the **Spelling and Grammar dialog box**.

3. Grammar Check

Meaning

Grammar Check identifies **grammatical mistakes** in sentences.

Incorrect grammar is usually shown with a **blue or green wavy line**.

Example:

She go to school every day.

Correct sentence:

She **goes** to school every day.

4. Options in Spelling and Grammar Tool

Option	Function
Ignore	Skips the mistake
Ignore All	Ignores the word throughout the document
Change	Replaces the word with the correct suggestion
Change All	Replaces all occurrences of the word
Add to Dictionary	Adds the word to the dictionary

5. Advantages of Spelling and Grammar Check

- Corrects spelling mistakes
 - Improves grammar accuracy
 - Saves time while editing documents
 - Helps create professional documents
 - Improves writing quality
-

6. Importance of Spelling and Grammar Checking

This feature is important because it:

- Helps in writing **correct documents**
 - Improves **communication**
 - Makes documents **professional and clear**
-

Important Shortcut Key

Shortcut Key	Function
F7	Open Spelling and Grammar Check

Using Thesaurus – Notes

1. Meaning of Thesaurus

A **Thesaurus** is a tool used to **find synonyms (similar words) and antonyms (opposite words)** of a selected word.

It helps improve the vocabulary and quality of writing in a document.

This feature is available in word processors such as **LibreOffice Writer**.

2. Purpose of Using Thesaurus

The Thesaurus is used to:

- Find **synonyms (similar words)**
 - Find **antonyms (opposite words)**
 - Improve vocabulary
 - Avoid repeating the same word many times
 - Make writing more clear and effective
-

3. Example of Thesaurus

Word: **Happy**

Synonyms:

- Joyful
- Cheerful
- Glad

Antonyms:

- Sad
 - Unhappy
-

4. Steps to Use Thesaurus

1. Open the document in **LibreOffice Writer**.
 2. Select the word whose synonym you want to find.
 3. Click **Tools → Language → Thesaurus**.
 4. A **Thesaurus dialog box** will appear.
 5. It will show a list of **similar words (synonyms)**.
 6. Choose the suitable word and use it in the document.
-

5. Shortcut Key for Thesaurus

Ctrl + F7

This shortcut opens the **Thesaurus window** directly.

6. Advantages of Thesaurus

- Improves vocabulary
 - Makes writing more interesting
 - Helps avoid repetition of words
 - Provides better word choices
-

7. Importance of Thesaurus

The Thesaurus helps writers to:

- Use **better words**
 - Make sentences **more effective**
 - Improve **quality of documents**
-

Important Shortcut Key

Shortcut Key Function

Ctrl + F7	Open Thesaurus
